Lost, Strayed or Stolen

Chemistry has encountered a problem with Jim Bennett's  
poster - it is being stolen as fast as it is put up  
by ardent art collectors. Incidentally, the poster  
design is an adaptation of an electron density contour  
map of a slice through a methane molecule! Registra-  
tion is apparently growing.

BUILDING ON CAMPUS

For those of you who have been swearing at the traffic tieups on Ring Road these mornings, the road is being widened and the area in front of the residences landscaped.

Work is back to normal on the construction of the Biology Building. Mr. Art Saunders reports that the building is scheduled for completion by the end of November. The Board of Governors has also authorized a plan for landscaping around the building, as weather conditions permit, plus the construction of a new parking lot in the area.

Soon it will not be necessary to walk on the grass or the road between the area of the Finnerty intersection of Ring Road and the Elliott Building. A new sidewalk is to be built.

DID YOU KNOW?

That a new rugby field will soon appear behind the huge piles of earth that are being moved on the DOT site (north of McKenzie Avenue? It is built to first class standards with drainage pipes and provision for irrigation.

That the total area of land comprising the Gordon Head Campus amounts to 380 acres?

A new building on campus will soon be going out for tender?
